

## QUALITY POLICY

TUX mobility B.V. is a company focused on the design, development and manufacturing of innovative, sustainable (solar) electric vehicles and vehicle components. The company primarily focuses on light electric vehicles and vehicle-integrated photovoltaics (VIPV), with energy efficiency, reliability and scalability as key principles. TUX mobility serves both the European and international markets and cooperates with partners in the fields of engineering, manufacturing and validation.

## Mission

The mission of TUX mobility B.V. is to accelerate the transition to sustainable mobility by developing high-quality, efficient and affordable electric mobility solutions. We aim to combine innovative technology with robust engineering and consistent quality, allowing our customers to rely on safe and future-proof products.

## Vision

Our vision is to grow into a leading developer and OEM partner in the field of sustainable light electric vehicles and integrated energy systems. TUX mobility aims to be recognized as an organization that structurally ensures quality, continuously improves, and proactively responds to changing customer needs, regulations, and technological developments.

## Core Values

- Quality and reliability
- Innovation
- Customer focus
- Transparency and responsibility
- Continuous improvement

# Continuous Improvement

At TUX mobility B.V., quality is a key priority. To continuously improve our processes and product quality, we secure and optimize our operations. To achieve this in a structured and efficient manner, we have implemented a management system that complies with the requirements of ISO 9001.

Our quality policy contains general quality objectives. Continuous improvement of our internal organization is central to this policy. We achieve this by:

- Developing a policy appropriate to the organization
- Communicating this policy within the organization
- Promoting quality awareness among employees
- Motivating employees and encouraging involvement in improvement projects
- Facilitating employee training and education
- Regular consultation with customers regarding requirements for products and services
- Continuously striving to increase customer satisfaction
- Complying with applicable laws and regulations
- Maintaining a quality management system in accordance with ISO 9001:2015

A combination of risk assessments, internal project evaluations, customer satisfaction analyses and internal audits contributes to identifying potential improvements within our organizational processes. By analyzing information and implementing improvements based on this information, a learning organization is created in which continuous improvement based on the PDCA cycle is central.

## Quality Objectives

To ensure the effective application and continuous development of our quality management system, the following objectives have been established for the coming year:

- Objective 1: Within one year, TUX shall secure access to a new credit facility or investor to provide working capital.
- Objective 2: Within 1.5 years, TUX shall establish a partnership with a local distribution and service partner.

Version 1.0  
Date: 16-12-2025

- Objective 3: Within 6 months, TUX shall be capable of producing the first vehicles and obtain homologation for India and the EU.
- Objective 4: Within 6 months, the customer shall be convinced of the USP of the VIPV system and confirm this in writing following validation activities (e.g. demo or pilot).

Annually, management will review the results of these objectives during the management review and re-establish the quality policy for the coming year.

**Scope:** The scope of the Quality Management System of TUX Mobility BV covers the design, development and manufacturing of electric vehicles, as well as the design, development and manufacturing of vehicle-integrated photovoltaic (VIPV) systems for integration in vehicles of other OEMs.

Manufacturing activities are performed under the responsibility of TUX Mobility BV, including control of externally executed manufacturing processes.
